What's New in the?

AlwaysOnTop is a lightweight software application whose purpose is to help you keep windows on top of other programs so you can focus solely on certain tasks. It can be deployed on all Windows versions out there. Unobtrusive running mode After a fast and simple installation process where you only need to press a few 'Next' buttons, you can find AlwaysOnTop sitting quietly in the system tray without disturbing your work. The system tray plays a central role in configuring the dedicated parameters. You can access the utility's features by right-clicking on its tray icon. A help manual cannot be consulted but you can set up the entire process on your own because they look very easy to decode. Keep favorite programs on top of others AlwaysOnTop gives you the possibility to check out a list with all running processes via the system tray. It requires a single click on the target application in order to make it remain on top of other utilities. Selecting it again returns its status back to normal. Although the program has not been updated for a long time, tests have pointed out that AlwaysOnTop carries out a task quickly and without errors. It does not eat up a lot of CPU and memory resource so the overall performance of the computer is not affected. Bottom line All things considered, AlwaysOnTop provides nothing more than a simple software solution for helping you perform certain tasks faster by keeping active windows on top of other applications. It is speedy and efficient, and can be configured by less experienced users and professionals alike.
