The school of money is not a new concept in all aspects of life because for a while, it has been around our resources and resources have been used for different purposes. This means not only to spend our resources for other people but also to use them for ourselves, by ourselves. In terms of priority, we have to take the present needs first and then other priorities that we cannot do without because it can't be done without any human effort if we have other priorities that are more important than the present needs then we give priority to the present needs and treat all the others as secondary until they get fulfilled. I took this concept to include things in our lives or to be more accurate, the things that we have in our possession which are not only used for us but also for our family members. Therefore, even though there is no specific order on the priority of this idea because of the fact that they are all important and very important there is a certain one that will be given precedence to all others. So, I have decided to give you a brief explanation of it regardless of how you look at this idea from my point of view. In the financial world, we have been using resources for different purposes from long ago when resources were not much in abundance because of the absence of resources in the marketplaces people found different ways to get their needs and wants satisfied. This is not only school material but also useful and useful for all ages and different cultures. The school of money is an educational book for children and teenagers. This book is read by many children and teenagers, especially in Africa and other parts of the world where all types of financial training programs proposed throughout the world proposed by various institutions are not available to them except what they get from their parents.
